

5/25/2012

Today's discussion is from the
Wildland / Urban Interface Category.

Wildland Urban Interface Hazards

Firefighters in the wildland urban interface may encounter hazards other than the fire itself, such as hazardous materials, utility lines and poor access.

• Hazardous Materials

- Common chemicals used around the home may be a direct hazard to firefighters from flammability, explosion potential and/or vapors or off-gassing. Such chemicals include paint, varnish and other flammable liquids; fertilizer; pesticides; cleansers; aerosol cans, fireworks, batteries and ammunition. In addition, some common household products such as plastics may give off very toxic fumes when they burn. Stay OUT of the smoke from burning structures and any unknown sources such as trash piles.

• Illicit Activities

- Marijuana plantations or drug production labs may be found in wildland urban interface areas. Extremely hazardous materials such as propane tanks and flammable/toxic chemicals may be encountered, as well as booby traps.

• Propane tanks

- Both large (household size) and small (gas grill size) liquefied propane gas (LPG) tanks can present hazards to firefighters, including explosion. See the "LPG Tank Hazards" discussion for details.

• Utility lines

- Utility lines may be located above and below ground and may be cut or damaged by tools or equipment. Don't spray water on utility lines or boxes.

• Septic tanks and fields

- Below-ground structures may not be readily apparent and may not support the weight of engines or other apparatus.

• New construction materials

- Many new construction materials have comparatively low melting points and may "off-gas" extremely hazardous vapors. Plastic decking materials that resemble wood are becoming more common and may begin softening and losing structural strength at 180° F, though they normally do not sustain combustion once direct flame is removed. However, if they continue to burn they exhibit the characteristics of flammable liquids.

• Pets and livestock

- Pets and livestock may be left when residents evacuate and will likely be highly stressed, making them more inclined to bite and kick. Firefighters should not put themselves at risk to rescue pets or livestock.

• Evacuation occurring

- Firefighters may be taking structural protection actions while evacuations of residents are occurring. Be very cautious of people driving erratically. Distraught residents may refuse to leave their property, and firefighters may need to disengage from fighting fire to contact law enforcement officers for assistance. In most jurisdictions firefighters do not have the authority to force evacuations. Firefighters should not put themselves at risk trying to protect someone who will not evacuate!

• Limited access

- Narrow one-lane roads with no turn-around room, inadequate or poorly maintained bridges and culverts are frequently found in wildland urban interface areas. Access should be sized-up and an evacuation plan for all emergency personnel should be developed.

Incident Objectives	1. Incident Name <i>Border Country Support</i>	2. Date Prepared <i>5/24/2012</i>	3. Time Prepared <i>2100</i>
4. Operational Period (Date and Time) <i>May 25, 2012 0800 - 2000</i>			
5. General Control Objectives for the Incident (include Alternatives)			
<i>Ensure firefighter and public safety. Review the 10 Standard Firefighting Orders and 18 Watch Out Situations by all line supervisors.</i>			
<i>Assist on initial attack and assume management responsibilities for fires that extend beyond initial attack in Baudette and Warroad Forestry Areas.</i>			
<i>Provide pre-planning assistance in areas where structure triage is a concern and Prevention/Firewise materials need distribution.</i>			
<i>Conduct 100% mop up on Holy Carp fire and Sawdust Pile fire.</i>			
<i>Perform other projects as agreed upon between the areas and incident management team.</i>			
6. Weather Forecast for Operational Period			
Roseau county: PARTLY SUNNY. SLIGHT CHANCE OF RAIN SHOWERS. MAX TEMPERATURE - 53-58 DEGREES. MIN HUMIDITY - 48-53 PERCENT. NORTHWEST WINDS 10 TO 15 MPH. PRECIPITATION - ISOLATED TRACE TO 0.10 INCH Lake of the Woods county: PARTLY SUNNY. SLIGHT CHANCE OF RAIN SHOWERS IN THE AFTERNOON. MAX TEMPERATURE - 55-60 DEGREES. MIN HUMIDITY - 46-51 PERCENT. WEST WINDS 10 TO 15 MPH. PRECIPITATION - TRACE AMOUNTS POSSIBLE.			
7. General Safety Message			
<p style="text-align: center;"><i>Look up, Look down, Look around!</i></p> <p style="text-align: center;"><i>Don't let complacency get the best of you or your team</i></p> <p style="text-align: center;"><i>com·pla·cen·cy - A feeling of contentment or self-satisfaction, especially when coupled with an unawareness of danger, trouble, or controversy.</i></p>

					W				

The convention calls for frequency lists to show four digits after the decimal place, followed by either an "N" or a "W", depending on whether the frequency is narrow or wide band. Mode refers to either "A" or "D" indicating analog or digital (e.g. Project 25) or "M" indicating mixed mode. All channels are shown as if programmed in a control station, mobile or portable radio. Repeater and base stations must be programmed with the Rx and Tx reversed.
